

Todo REST API Specification

Technical Endpoint Documentation & Query Parameters Guide

REST API DESIGN

V1.0

1. CORE ENDPOINTS (CRUD & OPERATIONS)

The base path for all endpoints in this module is `/api/todos`.

FUNCTIONALITY	HTTP METHOD	ENDPOINT	REQUEST BODY	SUCCESS CODE
Create Todo	POST	/api/todos	{ title, description, priority, dueDate }	201 Created
Get All Todos	GET	/api/todos	None	200 OK
Get Todo by ID	GET	/api/todos/:id	None	200 OK
Update Todo	PUT / PATCH	/api/todos/:id	{ title, description, status, priority, dueDate }	200 OK
Delete Todo	DELETE	/api/todos/:id	None	204 No Content
Mark Completed	PATCH	/api/todos/:id/status	{ status: "Completed" } (or empty)	200 OK

2. QUERY PARAMETERS (FILTERING, SORTING & PAGINATION)

Use standard URL query parameters on `GET /api/todos` for searching, filtering, and paging through records:

Search:	GET /api/todos?search=build
Filtering:	GET /api/todos?status=Pending&priority=High
Sorting:	GET /api/todos?sortBy=createdAt&order=desc
Pagination:	GET /api/todos?page=1&limit=10
